Modifying Nodes in Storm	4
Exercise 3 Answer	4
Adding and Removing Tags	4
Exercise 4 Answer	4
Adding Light Edges	7
Exercise 5	7

Answer Key

Creating Nodes in Storm

Exercise 1 Answer

Objective:

• Use Storm edit operations to create simple and composite forms.

Question 1: What Storm query did you use to create each node?

• You can create each node with the following Storm queries:

The phone number must be enclosed in **quotes** if the spaces are included.

[inet:email:header=(subject,"Re: Important Software Update!")]

The email header (**inet:email:header**) is a composite form whose primary property is two elements (the email header's field name and value).

Exercise 2 Answer

Objective:

• Use Storm edit operations to create a guid form and set some of its properties.

Question 1: What Storm query could you use to create the **ou:org** node and set the listed properties using a single edit operation?

• The following query will create the **ou:org** node and set the properties:

```
[ ou:org=* :name=QuoIntelligence :loc='de.frankfurt am main'
  :url=https://quointelligence.eu/ ]
```

ر ou:org=* :name=QuoIntelligence :loc='de.frankfurt am main' :url=https://quointelligence.eu/] والم

The node should look similar to the following:

NODE	ALL TAGS	ALL PROPS	ANATOMY			
 ou:org 32b6f5805daadeaef91e47abdcef875c 						
• :loo • :nar		.frankfurt a				
• :ur: • .cr		tps://quoin 24/05/13 18	telligence.eu/ :30:12.321			

Modifying Nodes in Storm

Exercise 3 Answer

Objective:

• Use Storm edit operations to modify an existing node.

Question 1: How can you **add** an edit operation to your Storm query to set the above properties for the QuoIntelligence **ou:org** node?

• The following query will apply all the changes:

```
ou:org:name=quointelligence<mark>[ :alias=quoint :founded=2020/02</mark>
:phone='+49 69 34868044' ]
```

ou:org:name=quointelligence [:alias=quoint :founded=2020/02 :phone='+49 69 34868044']

Adding and Removing Tags

Exercise 4 Answer

Objective:

• Use Storm edit operations to add and remove tags.

Part 1

Question 1: What Storm **edit operation** can you **add to this query** to apply the tag **rep.quoint.winnti** to all of these indicators?

• The following query applies the tags (the highlighted portion was added to the original query; line wraps):

media:news:publisher:name=quointelligence -(refs)> *
 [+#rep.quoint.winnti]

media:news:publisher:name=quointelligence -(refs)> * [+#rep.quoint.winnti]

The "hashtag" symbol (**#**) indicates this is a tag, and the plus (**+**) indicates we are adding the tag.

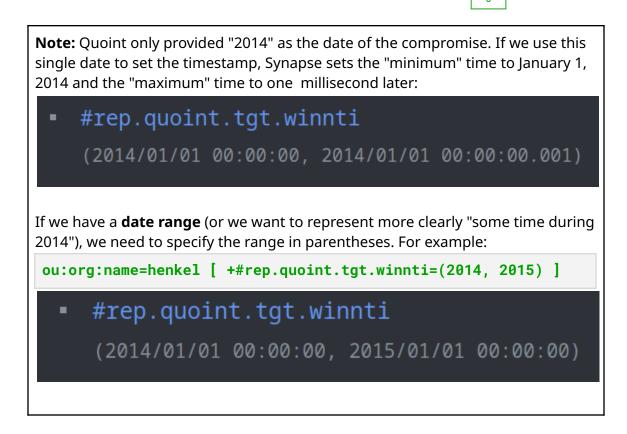

Part 2

Question 2: What Storm edit operation can you add to this query to apply the tag rep.quoint.tgt.winnti with a timestamp of '2014' to indicate the time QuoIntelligence reported for the compromise?

• The following query applies the tags:

ou:org:name=henkel [+#rep.quoint.tgt.winnti=2014]

ou:org:name=henkel [+#rep.quoint.tgt.winnti=2014]

Part 3

Question 3: What Storm **edit operation** can you use to fully remove the tag **rep.quoint.tgt.winnti** from the **ou:org** node?

• The following query removes the tag:

/ertex

Note: Removing the **#rep** tag removes that tag and all tags below it in the tag tree (i.e., the full tag).

If you used the edit operation [-#rep.quoint.tgt.winnti] it would remove only the final winnti element, leaving the tag #rep.quoint.tgt on the node.

Adding Light Edges

Exercise 5

Objective:

• Use the add edges dialog to add light edges between nodes.

Question 1: How many techniques are referenced by the ESET article?

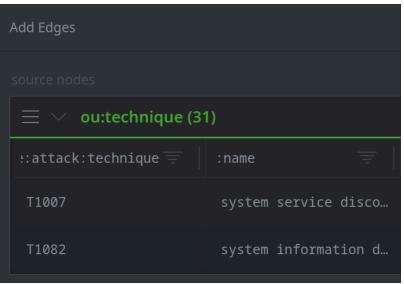

• There are **31** techniques listed in the article:

	media:news:title^='operation jacana' -(refs)> it:mitre:attack:technique -> ou:techniq							ue
	Tabular $\equiv \checkmark$ ou:technique (31)							
		e:attack:technique \Xi	:name		:tag		:reporter:name	
	\overleftrightarrow	T1007	system service di	SCOV			mitre	
	\overleftrightarrow	T1082	system informatio	on di…			mitre	
	\overleftrightarrow	T1608.001	upload malware				mitre	

Question 2: In the add edges dialog, in the source nodes section, how many nodes are displayed?

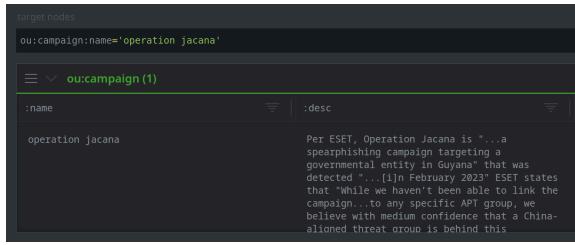

• There are **31** source nodes:

Tip: You can use the vertical scroll bar (on the right) to scroll through the results. Keep in mind that **all source nodes** will be linked to the target node(s) by the edge you specify.

Question 3: How many nodes are displayed?

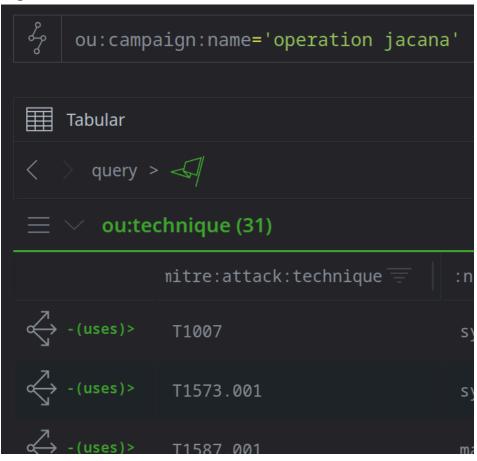

• Only **one** campaign node is displayed:

Question 4: Are the **ou:technique** nodes present? How are they linked to the **ou:campaign**?

• Yes - the 31 ou:technique nodes are present, and linked via a -(uses)> light edge:

Tip: The **Explore** button makes it easy to quickly check that the edge is present (and pointing in the correct direction). You can also verify that the edges were created using your new Storm skills! If the edges were created correctly, the query below will return the 31 **ou:technique** nodes:

ou:campaign:name='operation jacana' -(uses)> ou:technique
